

## **Suvil FreeAudio 2 BT**

“Bluetooth stereo headphones with microphone for the office at home”

**FreeAudio 2 BT** are Bluetooth stereo headphones with a Suvil Technologies Corp. microphone. These headphones are specially designed for the office at home as they allow us to move freely around the office when we use Skype or MSN, although they can also be used in our free time to relax; for example to listen to music without cables via our mobile and/or our personal computer.

The design of the **FreeAudio 2 BT** headphones is simple, compact and elegant. The quality of both the headphones and the microphone is equally noteworthy.

The **FreeAudio 2 BT** headphones are especially useful to control “voice recognition” programmes, due to the sharp quality of their microphone.

If we were to receive a phone call via our Bluetooth mobile whilst we are listening to music on a laptop with the **FreeAudio 2 BT** headphones, we would hear the call via the headphones and decide if we take the call or not. Once we have finished, we would be able to continue listening to the music selected or whatever we were doing prior to the phone call.

The price of the Suvil **FreeAudio 2 BT** headphones is **€34.95** including VAT.

## **Suvil FreeAudio 2 BT**

"Bluetooth stereo headphones with microphone for the office at home"
